

# Performance evaluation of graphics accelerator

Created by: Bc. Juraj Vanek

Supervised by: Ing. Adam Herout, Ph.D.

## About:

- benchmark inspired by „3D Marks“
- multiplatform: OpenGL 3.2, OpenCL, SDL, wxWidgets
- uses newest OpenGL features (GLSL, programmable pipeline, geometry shaders, instancing, VBO, FBO)
- measure performance in advanced effects (HDR, ambient occlusion, shadows, normal and displace mapping...)
- three performance presets: High End (Full HD 1080p), Mainstream (720p), Low-End

## 6 test series, 21 tests:

- 4 fillrate tests
- 5 fragment shader tests
- 4 geometry shader tests
- 3 vertex shader tests
- 4 HDR/complex tests
- 1 OpenCL compute test

## Results:

- **Total score:** to compare graphics card against others
- **Reference gfx:** GeForce GTX 285, 10000pts in Mainstream settings
- **Output:** HTML page with results

## On-line results browser:

- [www.stud.fit.vutbr.cz/~xvanek29/gluxmark2](http://www.stud.fit.vutbr.cz/~xvanek29/gluxmark2)
- compare various results from different users
- performance charts
- statistics
- gathered more than 150 results

## Fastest graphics cards:

<b>GeForce GTX 480 SLI</b>	<b>28 691 pts</b>
<b>GeForce GTX 470</b>	<b>19 226 pts</b>
<b>Radeon HD 5870</b>	<b>14 636 pts</b>
<b>Radeon HD 5850</b>	<b>14 039 pts</b>
<b>GeForce GTX 280</b>	<b>9886 pts</b>
<b>GeForce GTX 260</b>	<b>9446 pts</b>
<b>Radeon HD 5770</b>	<b>8372 pts</b>
